SEMESTER PROJECT

YOUR CODING HARNESS

A coding task becomes a code change you can review.

FH University of Applied Sciences TECHNIKUM WIEN

INSIDE THE CODING HARNESS

YOUR IMPLEMENTATION CHOICES

Your code	Build your own harness in Python. Frameworks and libraries are allowed.
Interface	CLI, UI, or both
Model	Local Ollama is a suitable starting point

You may reuse your lab code.

FH University of Applied Sciences TECHNIKUM WIEN

THREE WORKING DELIVERIES

1 **Working POC**
Setup, tools, and a code change

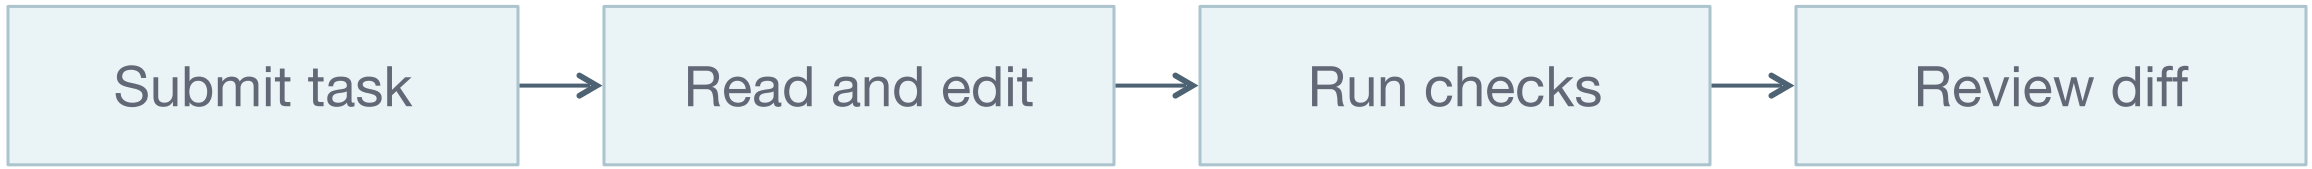

2 **Capable harness**
Navigation, context, and sessions

3 **Advanced harness**
Security, autonomy, and advanced features

Stage 1 details are available first.

FH University of Applied Sciences TECHNIKUM WIEN

STAGE 1: A WORKING CODING TASK

The first useful task

Fix a real bug in your selected repository.
Show a failing check become a passing check.

Controlled execution. Clear limits and errors.

DELIVERY 1

Working code

Repository link

A runnable handoff

Setup and usage README
Diagrams that match the code

A demo video of your harness

Task entry, tool use, code change, tests, and diff

Your next step: follow the stage 1 handout.
